1. Temperature will be taken twice daily upon arrival to work and before departure. The log book and the no-contact digital thermometer are located in D8-6, along with disinfectant wipes. Since temperature is under HIPAA regulation, the page of the log book will be replaced daily.

2. Using any shared equipment on other floors will need an approval from the floor leader PI (see below) in advance. Please contact the PI so that social distancing and disinfections can be arranged, instructed, and reassured with you prior to your use.

3. Clinical research- If it is part of patient care, there is no need to get approved in advance. If patients have to come to the clinic specifically for a clinical research project, then those studies need to be approved in advance. The official guideline will be available soon for such clinical studies.

4. New portal- About ten PIs will be emailed by Dr. Burne per stage (or per week) so that they can register into the portal through the provided link in the email for an approval to resume lab activities. More importantly, this registration and the approval will allow those individuals registered in the portal to be tested for the virus before coming back to work. The labs can reopen only after the approval and the testing.

5. Social distancing and disinfection is required when working in the lab. A mask needs to be worn when working with others in the lab and in all public spaces on this floor (main office and other offices, hallway, restroom, break room etc).

6. For the department/labs that need further disinfection-Hand sanitizers are available at the Henry Schein store on the first floor.
